Modern sleek profile
Economic range

Elegantly shaped
coverplate made of
glossy polycarbonate

Screw cap to hide
wall mounting screws
Self lubricating
terminal shutters

Housing made of engineering
thermo plastic material

Mounting screws neatly
mounted at the back

Extra screw cap supplied
at the back

Superior Quality

We ensure the superior quality of our products by using engineered robust thermoplastic that is durable, flexible, and the resilience to withstand hard impacts, flame retardant and built to last.

Silver Alloy Contacts

Switching contacts are made of silver alloy to withstand resistive and inductive loads, ensuring excellent performance throughout its life.

Convex Ball-end Screws

The coupling screws are manufactured with a convex shape ball-end to maintain the integrity of the wires and prevent splitting of the copper strands. These screws ensure a tight connection with the socket.

Anti-Loosening Mechanism

The socket's inner copper contacts are made of phosphor bronze, skillfully crafted to maintain its flexibility and compression with the plug terminals, preventing loosening over time and extend the product's life.

Double Pole Switch

Mira sockets are equipped with a double pole switch designed to completely disconnect the electrical current at both socket openings. This safety feature ensures electrical security for both people and devices.

Protective Safety Shutters

Mira socket outlets feature safety shutters to close off the contact openings for protection against the risk of electric shock. The tamper resistant shutters prevent children, and adults, from poking foreign objects into the socket. The spring-loaded shutters are designed to remain in a closed position until a plug is inserted.

High Conductivity Copper Cleats

Mira sockets are made from the highest purity of copper alloys to ensure high efficiency transmission of electric current, with minimal heat generation. This extends the life of the product and reduces the risk of electrical fires.

Revolutionary technology

The terminals are constructed as single pieces without joints or rivets thanks to revolutionary sheet metal technology. This accommodates more wires than conventional brass turned terminals.
